

# CRITERIA FOR CHOOSING THE RIGHT LIMS

A good LIMS should **adapt to your requirements** and should not force you to change your workflow to work properly. Many options to configure this LIMS for your uses is a massive positive point.

Other important aspects you should consider when thinking about purchasing a LIMS for your company are determined by **what your different departments want** out of this new addition to their everyday work life. On the following pages we collected some important requirements your departments might have concerning the implementation of a LIMS software solution.

# QUALITY MANAGEMENT DEPARTMENT

- Data accuracy, completeness and integrity
- Extensive and automated evaluations for quick identification of trends, patterns and quality violations for fast reaction times
- Effective and prompt communication with other departments
- Reducing human errors
- Retraceability of data for efficient troubleshooting

## LAB STAFF

- Saving documentation effort to give employees more time for valuable tasks
- Connectability to every measuring device to allow automated data collection
- Fast and reliable at any time
- Helps organizing and assigning projects
- Helps generating precise and reproducible results

## CEOs

- Saving costs by reducing documentation effort
- Saving costs by reducing material waste
- Getting valuable information to make data-based business decisions
- Connectability to existing software systems like: ERP, MES or PPS
- Higher quality allows you to maximize your income

# FURTHER USEFUL CHARACTERISTICS OF LIMS SOFTWARE:

Naturally requirements change over time and so do workflows. Having a LIMS that can handle changes and is **able to adapt** to these changes is very valuable. LIMS software solutions with a modular structure are prime examples for how to **combine high adaptability, flexibility and still remain enormously powerful**.

Data safety is also a topic you should seriously consider investing in, because cyber attacks do not only concern large companies. Most cyber attacks today are aimed at medium to small companies. Prepare yourself.

And last but not least: Of course LIMS software is not free, but there are quite a few **pricy solutions** on the market - like [FP]-LIMS.
