

PROFESSIONALLY MANAGE ANALYSIS DATA

NO MORE LOGBOOKS

[FP]-LIMS ANALYSIS MANAGEMENT

- Automatic collection of laboratory data via device interfaces
- Central storage, decentralized access possible
- Secure documentation & evaluation
- Color highlighting when tolerance limits are violated
- Audit Trail
- Export and report generation function

WHAT IS ANALYSIS MANAGEMENT?

Quality management made easy. With [FP]-LIMS analysis management, Excel lists, logbooks, and notes become obsolete.

Connect [FP]-LIMS to your measuring devices via numerous supplied interfaces and watch as the automatic import of your measurement data makes your work more efficient and error-free.

Monitor your quality levels with ease thanks to color highlighting for limit violations. Identify sources of error with the audit trail, which records every change made to the measurement data.

All analyses are stored in a central database and can be viewed remotely on various devices.

THE ADVANTAGES AT A GLANCE

Prices and module overview 

- Interfaces prevent human error during measurement data collection
- Color highlighting of elements gives you a quick overview of your qualities.
- The audit trail provides you with data transparency and assists with troubleshooting.
- Access your company's central database in analysis management from anywhere
- Export your measurement results and create reports with just a few clicks
