MONITOR PROCESSES EFFECTIVELY

BE AWARE OF WHAT IS HAPPENING

[FP]-LIMS BROWSER LICENSES

- Color-coded highlighting of quality violations
- SPC charts for trend monitoring
- Individually configurable views per role
- Fast, clear status visualization
- Pure data view (no editing), the inspection order management module allows inspection orders to be created
- Focused on the most important KPIs and information

WHAT ARE BROWSER LICENSES?

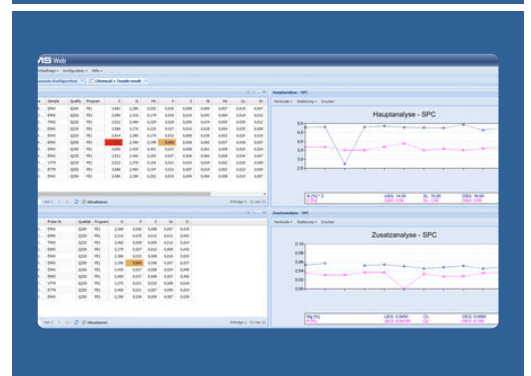

With [FP]-LIMS Browser licenses, you provide fast, secure read-only access to relevant LIMS information without additional software and without the risk of unintended changes. Employees can view exactly what they need for day-to-day decisions directly in the browser: current values, trends, status, and approvals.

Real-world examples:

- **Production management:** Checks measurement values, trends, and limit deviations during the shift in the browser and can respond early or trigger approvals.
- **Machine operator / shift supervisor:** Views the status of inspection orders as well as results and approvals on a terminal or tablet, without full access to the LIMS.
- **Auditor / customer / management:** Receives time-limited, read-only access to defined reports, dashboards, or historical measurement data.

[FP]-LIMS Browser licenses help you reduce follow-up questions to the lab, speed up decisions, and increase transparency while maintaining data integrity. You provide targeted read-only access for all stakeholders without granting full LIMS access and without additional administrative effort.

In conjunction with the Inspection Order Management module, inspection orders can also be created in the Browser Licenses module.

THE ADVANTAGES AT A GLANCE

Prices and module overview

- Easy rollout across production, lab, and QM devices—no local software required, just a browser and login access.
- Clear, status-focused process visibility shows what is pending, approved, or blocked at a glance for all users.
- Views can be tailored by role and task, so each user sees only the relevant data and reports needed.
- No access rights required: read-only access protects data integrity and minimizes administration effort significantly.
- Color-coded deviations and trend charts support quick assessment and faster, fact-based reactions.
