COMPLEX INSPECTION ORDERS MADE EASY

MORE EFFICIENT ORGANIZATION

[FP]-LIMS INSPECTION ORDER MANAGEMENT

- For labs with a broad service range
- Also suitable for laboratories with non-standardized sample structures
- Use templates or fully customized plans
- Manage complex, individual inspection orders
- With integrated competence management system
- Coordinate tasks across all employees

WHAT IS INSPECTION ORDER MANAGEMENT?

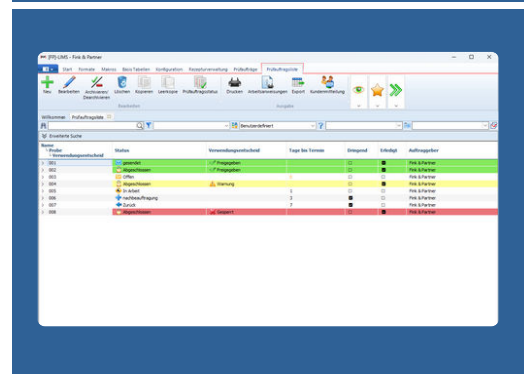

Manage inspection orders centrally, assign tests, and keep track of progress at all times. With a central database, you can avoid redundant data across multiple lists or systems, significantly reducing the error rate.

The competence management system integrated into [FP]-LIMS unleashes its full potential in combination with this module: you can see at a glance which employees are qualified for which tests. At the same time, the powerful inspection equipment management system documents the use and status of your test equipment seamlessly.

Ideal for laboratories with a wide range of services and non-standardized sample structures: create individual or predefined test plans, assign any number of samples, and adjust the analysis retrospectively if necessary. The integrated worklist ensures transparent task planning and efficient processing of all activities.

The [FP]-LIMS Professional Edition is required to use this module. This gives you full access to the functions described and allows you to benefit from consistent, centralized inspection order processing.

This creates a structured workflow with clear responsibilities and transparent statuses. Bottlenecks become visible early, supporting reliable scheduling and audit-ready traceability.

THE ADVANTAGES AT A GLANCE

Prices and module overview 

- Flexibility enables adaptation to a wide variety of application environments, even with non-standardized sample structures.
- Inspection orders can be created and managed for complex individual inspections, including any number of samples and tests.
- Inspection plan templates speed up your processes and ensure comparability across products, sites, and recurring inspections.
- Inspection plans can be customized to your individual needs, from fully predefined templates to one-off, tailored plans.
- Efficient task management for employees via the worklist, with clear responsibilities, priorities, and processing status.
