QUICKLY RECOGNIZE, QUICKLY REACT

PRODUCTION RIGHT IN VIEW

[FP]-LIMS PRODUCTION DASHBOARD

- Structured presentation of sampling points / production group elements
- Production group element coloring for spec violations
- Color coding possible for open inspection orders
- Quick navigation via tiles
- Clicking on tiles opens filtered analysis list
- Powerful tool for quality assurance

FACT SHEET

WHAT IS THE PRODUCTION DASHBOARD?

The [FP]-LIMS Production Dashboard gives users a quick overview of the status of all production group elements in the company. Production group elements in the [FP]-LIMS Production Dashboard refer to both individual products with their specific specifications and individual sampling points or measurement locations along a production line. The color coding provides information about the current status of the last analysis for the corresponding element:

- Green: The last analysis for this production group element meets the quality requirements.
- Yellow: There is an open analysis.
- Red: A quality violation was detected during the last measurement.

The Production Dashboard can also be accessed via the electronic lab notebook (ELN). The Professional Edition is required for use.

The dashboard is designed for fast navigation: large, color-coded tiles provide direct entry to the underlying data record. With a single click, users can open the relevant element and jump to a filtered list of analyses, including results, status, and approvals. This supports quick assessment during production and helps quality assurance identify where action is needed - without searching through menus or reports.

List of recent analyses of a production group element

↓

Order number	Sample No.	START Date	Water [m³]	Mobile acid [m³]	Process [kg/h]	Acetic acid [m³]	Acrylic acid [m³]
1000001	01	20.06.2018 12:00:00	0.000				
1000002	02	20.06.2018 12:00:00	0.000				
1000003	03	20.06.2018 12:00:00	0.000				
1000004	04	20.06.2018 12:00:00	0.000

THE ADVANTAGES AT A GLANCE

Prices and module overview →

- Reduced response times through a fast, comprehensive overview of all production group elements and their latest status.
- Quick navigation via large tiles that open the relevant element and a filtered list of current analyses in one click.
- Improved communication with real-time visibility into results, open analyses, and current status updates across teams.
- Easy to use and available directly from the electronic laboratory notebook (ELN) when required in daily work.
- More control and transparency with color-coded status tracking for each product, sampling point, or measurement location.
