SECURE RECIPE MANAGEMENT

# SECRETS SHOULD REMAIN JUST THAT

## [FP]-LIMS RECIPE MANAGEMENT

- Secure, traceable recipe documentation
- Protect and retain know-how
- Simple, professional recipe management
- All recipes stored centrally in one system
- Add attributes, substances, and pictograms
- Version control for every recipe change

FACT SHEET

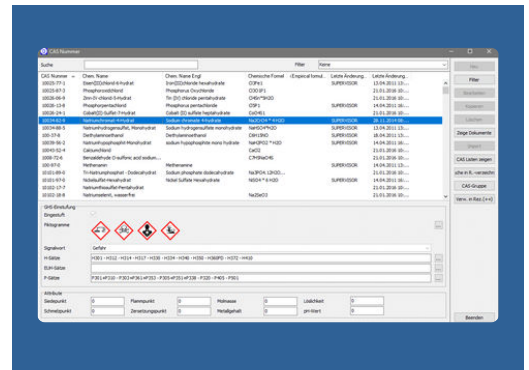

## WHAT IS RECIPE MANAGEMENT?

The [FP]-LIMS Recipe Management system is a simple, professional, and above all, secure software solution for managing your manufacturing processes. You can easily create new products and recipes, thereby protecting your most important corporate asset. At the same time, the system reduces errors: central maintenance of all recipes guarantees reproducibility, and changes can be tracked seamlessly thanks to the audit trail.

The module also allows you to define substance restrictions and limit values, which are automatically calculated for composite products. Each substance, as well as complete formulations, can be labeled with GHS symbols and H and P statements, supporting safe and compliant handling of hazardous substances.

This preserves valuable know-how while allowing you to benefit from increased error reduction, better traceability, and systematic management of limit values and safety labels. [FP]-LIMS Professional is required for use.

Version management ensures every recipe change is documented and reproducible: revisions can be created, compared, and clearly assigned to production. Additional attributes (e.g., raw materials, suppliers, process parameters, usage notes) can be stored in a structured way, making recipes easier to find, review, and reuse. This supports controlled recipe release and standardizes manufacturing steps while maintaining full traceability.

## THE ADVANTAGES AT A GLANCE

Prices and module overview

- All recipes are stored securely and centrally, with controlled access and a single source of truth for production.
- Detailed information creates a reliable basis for reproducibility, including attributes, substances, limits, and safety labels.
- Retain expertise even beyond employment relationships by documenting procedures, parameters, and rationale in one place.
- Complete traceability of all changes thanks to the audit trail, with timestamp, user, and documented change history.
- Conveniently maintain recipe versions directly in the module, including revisions, comparisons, and clear release status.
