QUICK, AUTOMATED AND RELIABLE

# FINALLY AUTOMATE TEDIOUS TASKS

## [FP]-LIMS WORKFLOW ACTIONS

- Automate evaluation and control tasks reliably
- Link follow-up actions directly to results
- Trigger automatic, rule-based email dispatch
- Add custom instructions for defined cases
- Nearly unlimited options via flexible setup
- Gain better control through consistent rules

FACT SHEET

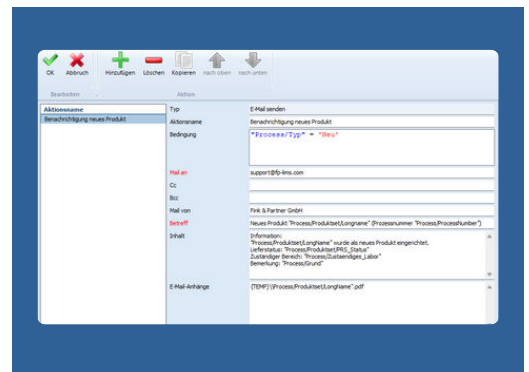

## WHAT ARE WORKFLOW ACTIONS?

With [FP]-LIMS Workflow Actions, you can process your data individually and flexibly. Workflow Actions can be used to automate various evaluation and control tasks and link them to follow-up actions. This allows you to stay up to date on all developments by sending emails, among other things, and react quickly to changes in your production.

For example, if compliance with certain tolerances for a characteristic is essential to maintain the quality of your product, a workflow action can be set up that immediately blocks the analysis when a tolerance is exceeded, thus stopping further faulty production. The necessary steps for troubleshooting can then be initiated and production can continue without significant material losses.

With [FP]-LIMS Workflow Actions, you can automate procedures that occur in recurring processes, such as complaint management or incoming goods inspections, ensuring consistent, rule-based execution across shifts and locations. This is based on configurable rules with triggers and conditions. The workflow actions adapt to your processes and document each execution in an audit-relevant manner.

The [FP]-LIMS Professional Edition is required to use this module.

## THE ADVANTAGES AT A GLANCE

Prices and module overview 

- Automate procedures related to processes such as complaints or incoming goods inspections.
- Automate repetitive and time-consuming tasks in no time at all, from checks and approvals to blocking and escalations.
- Stay informed about developments with automatic email notifications to defined recipients.
- Perfectly adaptable to your workflows with custom instructions, responsibilities, escalation paths, and documented execution.
- Flexibility creates virtually unlimited set-up possibilities through configurable rules, triggers, conditions, and actions.
